Video-IN & Video-OUT Box

PLIXUS POWERED

televic conference

INSERT & EXTRACT video, presentations, lip-synced streams, and more.

All over a single CAT 5e cable. Only on Plixus.

Open up rich, multimedia meetings with only a little black box: a **Video-IN** or **Video-OUT Box**.

The **Video-IN Box** is the perfect companion to insert any video stream anywhere on the Plixus® network. Take presentations, recorded video from a camera or a video conference, and make it available to any participant. The **Video-OUT Box** makes extracting any stream on the Plixus® network to an external device child's play. Send presentations or video streams to any display or projector.

To ensure maximum compatibility options, the Video-IN & Video-OUT Box comes equipped with multiple interfaces. It features 2 Plixus® conference network ports, an HDMI in or out, dry contacts to request or select a video stream, and a dedicated video request or select slot. As a result, it gives integrators great flexibility. Even mounting the unit is a breeze: the Video-IN & Video-OUT Boxes have VESA & DIN-rail mount options. Finally, it comes with the convenience of the Plixus® architecture: a simple CAT 5e cable is all that is needed to connect it to the network.

Plug & Play

- Plug and play setup
- Single CAT 5e cable suffices
- Transport lip-synced 1080p/60 video with a delay fewer than a single frame
- Effortless integration in Plixus® network
- Small footprint
- VESA mount option
- DIN-rail mount option
